Changes in values from year to year are a result of production changes resulting in stain use changes, solvent use changes and natural gas or wood use changes.

As of April 20, 2020 I, Luke Simpson, certify that I have read the toxic substance reduction plans for the toxic substances referred to below and am familiar with their contents, and to my knowledge the plans are factually accurate and comply with the Toxic Reduction Act, 2009 and Ontario Regulation 455/09 (General) made under that Act.

Process Description / Quantification

Receiving/Inventory - Durham Furniture receives paints including (lacquers, glazes, stains and sealers) as well as solvents and thinners from finishing suppliers. Finishing products and cleaning solvents are stored in closed containers until ready for use. There are no emissions associated with the storage of the finishing/cleaning products during this stage.

Mixing - paints are reduced/mixed with thinners as required. The mixing stage occurs over a relatively short period of time and no significant emissions are expected to be associated with this process.

Spray Painting & Drying - mixed finishing products are applied to the wood products in the facility's spray booths and dried prior to moving to the final assembly processes. All solvents applied during the spraying operations are driven off during either the spraying or drying operations and none continue on as part of the product sent for assembly. A small portion of the finishing products may end up as waste paint throughout the year which is collected and sent off-site for recycling.

Cleaning - finishing gun and line cleaning is conducted using a solvent product which is recovered for off-site recycling. A small portion of the finishing products applied using the guns would also be washed out of the guns/lines using the solvents and would be part of the overall paint/solvent waste sent off-site for recycling.

Assembly, Storage, Shipping - the final finished products do not release any solvents as these are expected to have been driven off during the finishing and drying operations.

Combustion Processes

Wood Combustion - the facility uses clean waste wood generated during wood processing operations to generate comfort and process heat for the facility. Combustion by-products include a small amount of solvents and particulates emitted to the atmosphere.
